From May 2017 to March 2023 ServiceNow Singapore
I have started working as a full stack web developer on ServiceNow.
The company makes competitiveness in technology-based industries through applied research.
For 6 years, I have worked on several big project and improved my skill continue.
At the final year, I got Certified Web and Blockchain Engineer position.
The projects I have been involved in are:
Javis Projects (Social Communication and Real Estate)
Worked on this project as a full-stack web developer.(React, Ruby, MySQL, Node)
Orchestrated online layout, database data presentation and third-party API integration to improve information access.
Betnomi Projects (Gambling)
Worked on this project as Full-Stack Developer.(Paytm, React, Node, MongoDB, Casino API)
I managed KYC Certificate Implemented, Building Responsive and Pixel-Perfect Frontend, Multiple Payment Integration
Atom Foundation Projects (Blockchain)
Worked on this project as Front-End and Blockchain Developer.(Smart Contract, Web3, JavaScript, GraphQL)
Created successful websites that met requirements for objectives such as load speed and design.
Implemented improvements to boost site performance.
Defined and conducted design processes at all stages, including research, conceptualization, testing and implementation.
Viral Projects (Blockchain Dapp)
Worked on this project as Senior Web and Blockchain Developer.(Solidity, Rust, Web3.js)
Viral is self staking token and it makes great profit by only holding token.
Built websites leveraging original theme creation in various software packages.

From April 2023 to March 2025 Fairloto Estonia

The Lottery Blockchain Project is a blockchain-based initiative aiming to revolutionize the lottery industry. Founded by experienced professionals, it utilizes blockchain technology decided to create a transparent and secure platform for conducting lotteries.

So they hired me to create this project. Also they have special marketing strategy and I had an interest on it. I have created this project from scratch and completed it on test step. We are ready to move to mainnet immediately and am waiting good crypto market.

And I have built our own chain using substrate and we are going to use it for future publish.

We have built this project on several networks(BSC, Solana, Avalanche, Optimism, Arbitrum, Tron, Polygon and etc)
